

SIGN TO FENCE INSTALLATION

Standard Park Signs (4 mounts)
Paw Sign (6 mounts)

Materials Needed (per sign mount point):
Extra materials can be found at any standard hardware store.

- 9/16-inch wrench (or socket wrench)- not included
- 1x 3/8"-16 x 1 1/2" Hex Bolt
- 1x 3/8"-16" Stop Nut
- 2x 3/8" Flat Washers

Instructions:

1. Position the Sign:

Hold the sign against the fence in the correct location.

Line up the pre-drilled holes on the sign with the bars of the fence.

2. Insert the Bolt:

Place one washer on the bolt.

Push the bolt through the hole in the sign, then through the fence rail from the front side (as shown in the image).

3. Add the Second Washer:

Once the bolt is through the other side of the fence, slide the second washer onto the bolt.

4. Attach the Stop Nut:

Screw on the stop nut by hand to hold everything loosely in place.

5. Tighten:

Use a wrench or socket to tighten the nut securely.

Ensure the sign is snug against the fence but **do not over-tighten** (to avoid damaging the sign).

6. Repeat:

Repeat the above steps for each mounting point on the sign.
